

1. Input year and find whether it is a leap year or not

2. Take two numbers and print the sum of two numbers

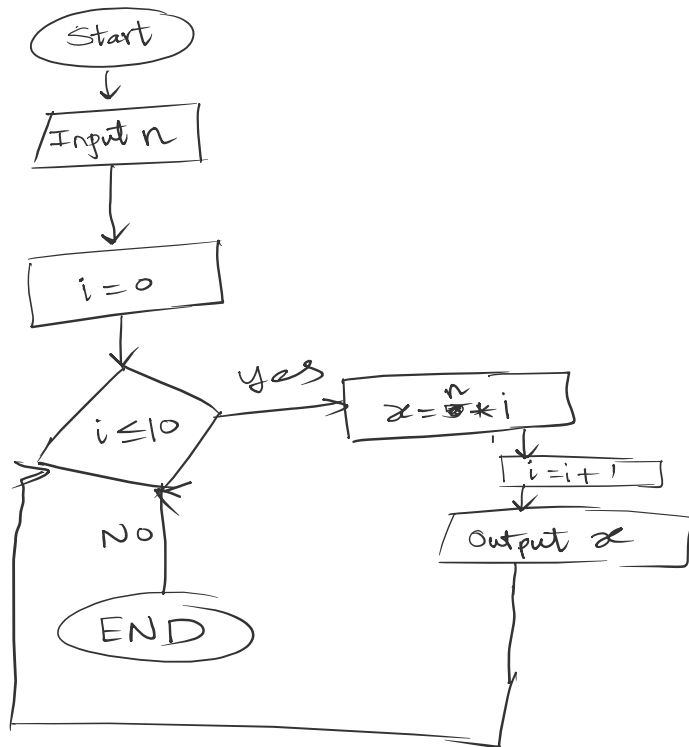

Pseudocode

```

start
Input a, b
Compute sum = a + b
Output sum
END

```

3. Take a number as input and print multiplication table

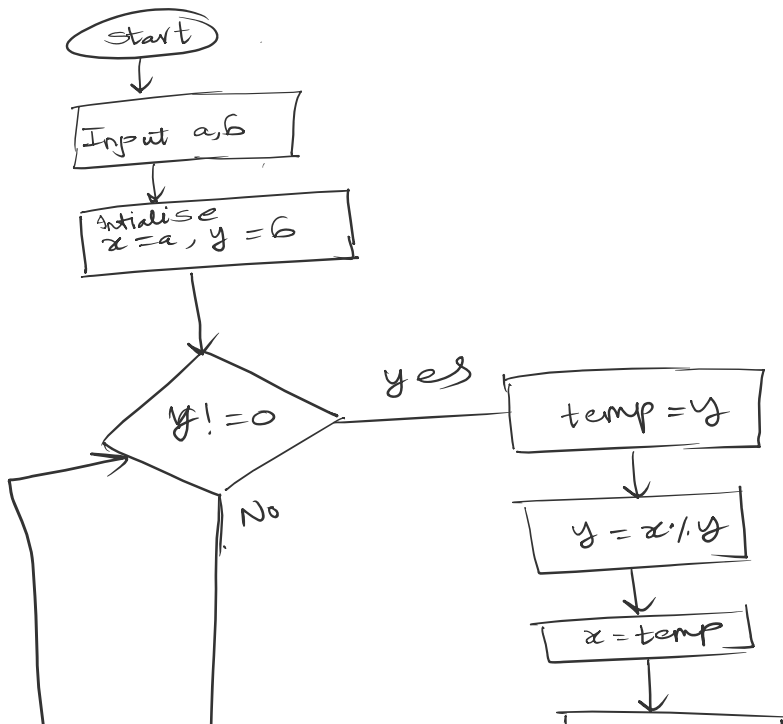

Pseudocode:

```

Start
Input n
Initialise i = 0
if i ≤ 10
    compute x = n * i
    i = i + 1
    output x
else
    END
  
```

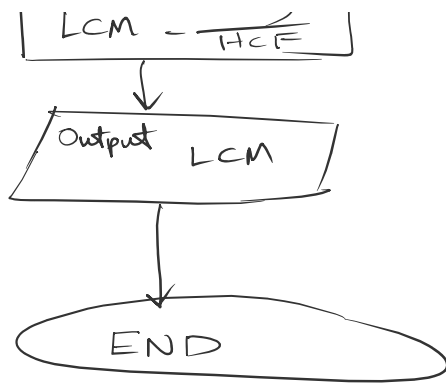

4. Take 2 numbers as inputs and find their HCF & LCM

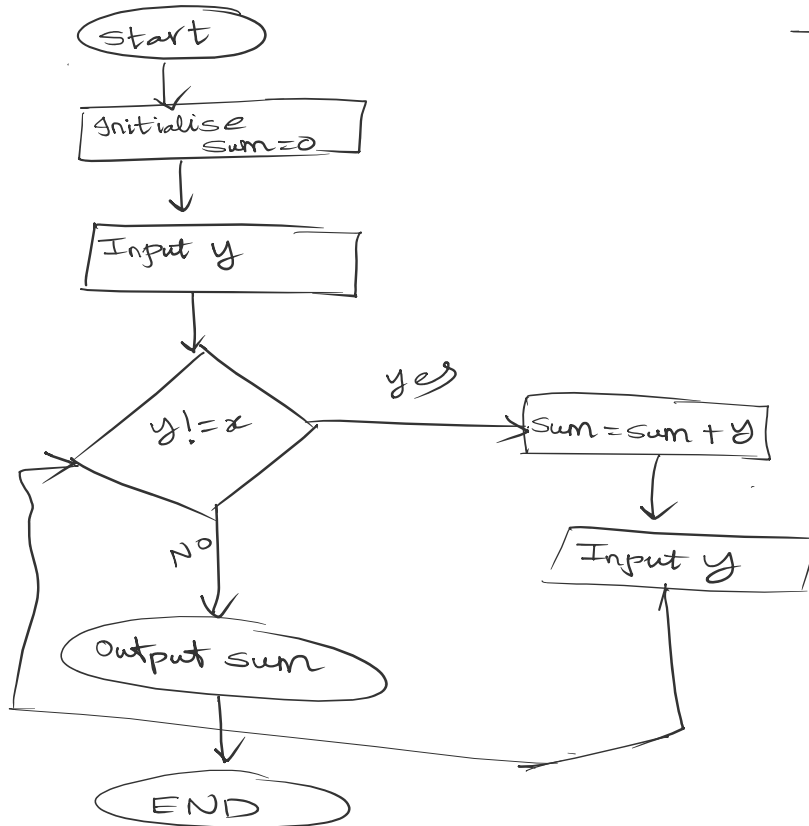

Pseudocode:

```

Start
Input a, b
Initialise
while y ≠ 0
    do
        temp = y
        y = x / y
        x = temp
    END while
    output LCM
    Compute
  
```

5. keep taking numbers as input till user enters 'x'; after sum of all.

Pseudocode

```

Start
Initialise s
Input y
while(y !=
    sum
    In
  END while
  output sum
  END
  
```
